Jobs Supported by State Total Goods Exports, 2014

U.S. jobs supported by total goods exports have increased by more than 1 million since 2009.

Jobs Supported by State Exports

FAQs:

Q: Where is the complete Jobs Supported by State Exports List?

A: The complete list is available on our website at: <http://www.trade.gov/mas/ian/employment/index.asp>.

Q: Why isn't there jobs supported by Total (Goods and Services) State Exports detail?

A: Unavailability of services export data by state prevents the estimation of state-level jobs supported by services exports and total (goods and services) exports.

Q: Can I add jobs supported by goods exports estimates from several states together to create a custom regional estimate?

A: Yes. For example, if I wanted to know the number of total jobs supported by exports from New York and New Jersey, I would add 389,957 and 165,695 to arrive at a total of 555,651 jobs that are supported by 2014 goods exports from New York and New Jersey combined. Out of an estimated 7.1 million jobs supported by goods exports from all 50 states, goods exports from New York and New Jersey together support about 7.8% of the national total.

Q: What does origin of movement mean and how does it impact these estimates?

A: The State Origin of Movement (OM) series is produced by the United States Census Bureau and generally provides export data based on the state from which the export began its journey to the port of export. However, in some cases, the origin of movement data do not reflect the state from which the export was initially transported. For example, when shipments are consolidated, the OM data will reflect the consolidation point of the shipment as opposed to the transportation origin.

Q: What is the difference between goods exports and manufactured exports?

A: Goods exports include manufactured products as well as other products like agricultural goods and natural resources commodities.

Rank	State	Increase in Jobs Supported by Total Goods Exports, 2009-2014
